Meeting overview

Discussion:

- The meeting started with getting updates from each team-mate regarding their tasks in the previous week.
- The current problems were discussed and the probable solutions were suggested.

Our targets for this week are as follows:

- Making a Wiki on a platform similar to Gitlab.
- To make the system architecture which covers all the subsystem in the form of block diagram stating their inputs and outputs correlating with other blocks.
- Assigning the owner for each block.

Sub-Team Tasks:

Robosot:

Team A: To localize bot using AprilTag through an overhead camera and constructing the physical

Team B: To localize the bot through triangulation method by using on-board camera.

Humanoid:

Team A: To design the schematic and board of Main Controller Board.

Team B: To make the qualification video for Hurocup describing the various tasks that the system can perform the event.
